Overview

Concept

Language Quest: Magnolia and the Lost City is a language-RPG game that puts you in the shoes of Magnolia, a foreigner in the fictional city of Puerto Luna. By solving language puzzles and battling enemies in real time, players will be able to understand basic ideas, words and phrases in Spanish.

Key Features

- **Dynamic Jobs:** Engage in a variety of jobs that require both language proficiency and skill.
- **Skill-Based Combat:** Master combat using skills acquired through your language journey.
- **Challenging Quests:** Embark on quests that test your language abilities and reward your progress.

Domain

Education - Language Learning

Player Experience

In this immersive RPG, players will embark on a journey of language acquisition while seamlessly progressing through the game. The primary focus will be on stealthily learning Spanish through natural language exposure.

Dialogue boxes will occasionally appear to explain key language concepts, but the game's emphasis will be on organic learning. Players will encounter Spanish words and phrases naturally, allowing them to learn through context and engagement with the game's mechanics. This approach aims to create a more immersive and engaging learning experience.

Target Audience

- **Language-Curious Adults:** Individuals interested in learning Spanish but hesitant to commit to traditional language learning methods.
- **Casual Learners:** Those seeking to acquire basic Spanish phrases and expressions in a fun and engaging way.
- **Young Players:** Open to younger audiences who may also benefit from this immersive learning experience.

Platform

Current-gen consoles and PC. Mobile release possible if adjusted.

Inspiration

This game draws inspiration from my own journey of learning English while playing *Pokémon Blue*. Faced with language barriers as a child, I found that the fun and engaging gameplay motivated me to overcome challenges and continue exploring while also learning English along the way.

While the game incorporates elements from other games, it stands out with **unique mechanics and systems specifically designed for language learning**.

This blend of influences creates a memorable and immersive experience that sets it apart from traditional language learning methods.

Games that utilize language in some form and are not cataloged as educational games. Going clockwise: Tunic (Isometricorp Games), Final Fantasy X (Square-Enix), Wordle (the odd one out but has an interesting mechanic) and Chants of Sennaar (RUNDISC).

These games have systems that push interaction from the player with the world or characters. Going clockwise: Persona 5(Atlus), Pokemon Sun & Moon (The Pokemon Company), Like a Dragon: Infinite Wealth (Ryu Ga Gotoku Studio) and Final Fantasy VII Remake (Square-Enix).

Project Management

While most of the information about this game can be found in this GDD document, most of the technical data, asset requests and other useful information can be found in the project management tool Trello, where everyone on the team has access to or the dedicated Discord server.

Narrative

A contemporary RPG set in a fictional city inspired by a real-world coastal city. Players will navigate a world that blends familiar elements with unique challenges, providing opportunities to apply their language knowledge in authentic scenarios.

The engaging narrative focuses on Magnolia, a foreign woman seeking adventure. Her journey leads her to Puerto Luna, a vibrant city with a known legend. The rumored existence of a lost city near the port adds an element of intrigue and adventure to her quest.

Magnolia's adventure will unfold as she explores the city, works various jobs to earn money, and immerses herself in the local language and culture. A significant discovery about the lost city will set her on a collision course with a powerful corporation seeking to exploit the city's natural heritage for profit. This conflict will drive the main storyline and introduce new challenges and obstacles for Magnolia to overcome.

Story Overview

Act I: Arrival and Integration

- Magnolia arrives in the city and faces an initial setback.
- She finds temporary shelter with a local family.
- Magnolia begins working and learning the language while forming connections with the family's son.
- She meets a new friend at the language academy.

Act II: Discovery and Conflict

- The trio embarks on a school project to explore nearby ruins.
- They encounter a fellow history enthusiast and form a team.
- Magnolia continues her language studies and job-related learning.
- The team discovers a hidden entrance to an uncharted area of the ruins.
- A dangerous organization emerges as a threat to the lost city.

Act III: Climax and Resolution

- The final confrontation with the evil organization begins.
- Magnolia and her team must infiltrate the organization's headquarters and defeat the CEO.
- Following victory, Magnolia feels confident in her language skills and is ready for a

new adventure.

Prototype Scope

The prototype will feature one quest from Act I involving the gathering of ingredients.

Brief Description: Mr. Fernandez gives Magnolia a list and asks her to buy the ingredients listed there.

In-game title: Una cena en familia

In-game description

- Compra unas tortillas (x/15)
- Compra unos aguacates (x/4)
- Compra unos tomates (x/2)
- Compra una cebolla (x/1)
- Compra un queso (x/3)

How to complete: Bring the listed ingredients.

Rules

- Mr. Fernandez will give Magnolia \$100 Pesos to buy everything (this is not enough and the player needs to work to earn the required amount).
- This amount must be added to the player funds.
- The quest must be displayed in the HUD and updated based on progress.

Gameplay

Systems Overview

Language Quest is a unique RPG that blends language learning with engaging gameplay. Players will embark on a journey where language proficiency is key to success.

The game features a variety of minigame-based **Jobs** that require both language skills and strategic thinking. These jobs serve as the primary source of income and offer opportunities to practice Spanish. But that is not all, as they also unlock the Jobs (classes) the characters can take during combat.

Players can test their language skills at the Language Academy. Passing exams will unlock new jobs, higher difficulty levels, and valuable rewards.

The game features thrilling action-RPG combat. Players are able to move freely and attack. By hitting consecutive attacks, they will generate Action Points (AP) which can be consumed to perform powerful Abilities.

These are the main systems of *Language Quest*, but there are other small features that make up the entirety of the game. This will allow for seamless language learning while also having fun with the job progression, and combat, creating a rewarding and synergistic gameplay experience.

Gameplay Loop

Battle System

In *Language Quest*, battles primarily take place within Magnolia's mind. This unique combat system blends action and strategy for an engaging experience.

Players have freedom of movement within the arena and can initiate attacks with a simple button press. While normal attacks are quick but weak, they serve the crucial purpose of building Action Points (AP). Once enough AP is accumulated, players can unleash powerful skills or actions.

During skill selection, the action slows down, allowing for careful decision-making. Additionally, players can parry strong attacks, potentially leading to devastating counterattacks.

Enemy Encounters

In *Language Quest*, most battles take place within Magnolia's mind, triggered by language-based interactions with NPCs. These encounters serve as a unique way to practice language skills but also enjoy the action combat.

When Magnolia is asked a question, a dramatized version of the situation unfolds in a battle. The outcome of the battle can be influenced by whether the initial answer was correct or incorrect, with bonuses or penalties applied accordingly. Winning the battle will let Magnolia continue her previous task but losing will make her too flustered to continue what she was doing and run home, dropping some money in her desperation.

Over time, Magnolia will come to view these battles as opportunities for growth rather than stressful situations. This meta-context aligns with real-life scenarios, where challenges can be seen as opportunities for learning.

Section	Notes
Battle Triggers	• Conversations with NPCs, such as store clerks • Random encounters with passersby • Language Academy exam bosses • Story-driven battles outside Magnolia's mind
Technical requirements	• Not every time players go into a store a battle will be triggered. NPC passersby will also be random. • Some encounters will always trigger (such as exam bosses or story encounters).

Example:

1. Magnolia goes to a store to buy items.
2. The clerk greets her: “Buenas tardes” (Good afternoon).
3. Magnolia gets 3 options she can choose from.
4. Selecting the correct answer (“Buenas tardes”) will grant her a buff. Selecting another option will give her a debuff.
5. Battle starts.
6. After winning, Magnolia can now continue the flow.
7. If she loses, she will lose some money and spawn at her home.

Prototype Scope

The prototype will feature 1 battle encounter against the Store clerk.

Shop

If players select Shop, then they will be greeted by the store owner.

- The store owner will greet the player and it will change depending on the time of day.
- A dialogue will appear where players need to choose the correct answer among 3 options.
- Selecting the **Correct** option will take them to the Shop menu.
- Selecting the **Wrong** answer will take them to the Fight scene.

Fight

If the player wins, they will be taken to the market scene with the store shop UI open.

If the player loses, they will be taken to the market scene outside of the store shop, making the player do the flow again.

Combat

Language Quest features a dynamic real-time battle system that blends action and strategy. Players control one party member, engaging in combat using normal attacks to build up Action Points (AP). AP is a crucial resource that allows players to unleash powerful abilities and spells. By strategically using normal attacks, players can efficiently accumulate AP for these special actions.

The equipped job determines the specific abilities and spells available to the player. This system encourages experimentation and customization, as players can choose different jobs to suit their playstyle and combat strategies.

In addition to abilities and spells, players can also spend AP to utilize a variety of items during combat. These items can provide healing, buffs, or other tactical advantages.

Technical	Notes
Controls	● L-joystick - Move character ● R-joystick - Move camera ● X button - Attack ● A button - Open Command menu ● B button - Exit Command menu ● RB button - Parry
Scene	Single-screen combat scene separate from the normal environment.
Frame Data (S = Start-up, A = Active, R = Recovery)	
1st jab	12f S, 3f A, 8f R
2nd punch	12f S, 3f A, 8f R
3rd Hook	12f S, 3f A, 8f R
Water Splash	Instant, 3f A, 8f R
Eat Lunch	Instant, 3f A, 8f R

Parry

The parry system rewards players for both language proficiency and quick reflexes. Enemies will occasionally flash red, signaling an impending powerful attack. Players must time their parry perfectly to counter the attack successfully.

A quick language minigame will appear on screen, demanding a swift and accurate response. Players must select the correct answer from three options within a limited time frame.

A successful parry, combining precise timing and correct language choice, will stagger the enemy¹, opening them up for follow-up attacks and combos with increased damage.

If the parry fails, the action will return to normal.

Technical	Notes
Pressing the RB button in battle will activate the parry, which should make the character make a blocking pose for the duration of it.	8f S, 22f A, 45f R
When a parry successfully intercepts a special enemy attack: • a quick language minigame will activate. • the game will enter slow-motion tactical mode, and player commands will be temporarily disabled.	
The language minigame will show a word or phrase and players will need to choose the correct answer among the 3 options. A timer will count down.	• The timer should be 5 seconds • The questions can be from the same DB as the Exam DB
If players choose incorrectly or the timer runs out, nothing will happen.	
If players choose correctly, they will stagger the enemy.	

Jobs

Jobs play a multifaceted role in *Language Quest*, serving as:

- **Income Generation:** Jobs provide a steady income, allowing players to progress through the game and unlock new opportunities.

¹ The stagger system will not be implemented in the prototype, so a successful parry will instead deal massive damage.

- **Language Learning:** Engaging in various jobs offers practical language practice and reinforces vocabulary.
- **Combat Abilities:** Each job grants unique skills and abilities, enabling players to customize their characters for different playstyles.

Jobs typically involve engaging minigames that test both language skills and reflexes. These minigames may include:

- Quick-Time Events (QTEs): Responding to prompts within a time limit.
- Memory Games: Remembering and recalling information.
- Puzzle-Solving: Solving language-based puzzles or riddles.
- Dialogue-Based Interactions: Navigating conversations and making appropriate choices.

Jobs feature multiple levels of mastery, introducing new challenges and rewards as players progress. Advancing through job levels also unlocks new skills and abilities, enhancing both language proficiency and combat effectiveness.

Inspired by traditional RPG classes, Jobs offer a variety of roles and specializations. While loosely based on concepts like warrior, mage, and thief, these jobs have been adapted to modern-day settings, such as Kitchen Assistant, Store Clerk, and Librarian.

The Jobs available to the player are a reference to real, modern jobs with a hint of the fantastical. Image: Like a Dragon: Infinite Wealth. Ryu Ga Gotoku Studio.

Players can choose any job for their characters, allowing for diverse team compositions and mastering a job can unlock permanent skills and buffs that can be used by other characters, fostering customization and strategic gameplay.

Prototype Scope

In the prototype, there will be 2 Jobs available and only 1 level for each: Kitchen Helper and Store Stoker.

They will also give the player 1 skill to use in combat AND both Jobs will be “equipped”, meaning both skills are available to use in combat.

Job #1: Kitchen Helper

Talking from real experience, one of the jobs people get when they arrive in a country where they don't speak the language is Kitchen Helper. With few words to learn and more of a "hands-on" approach, this is ideal for people that need to earn some quick money.

Prototype Scope

Brief description: Minigame where you take orders from the head chef and need to bring the necessary items he asks.

Tutorial text: "Find the dirty dishes and bring them to the sink. Wash them quickly and efficiently, then place them in the cabinet for storage.

Keep an eye out for orders from the waiters. When you see an order, grab the correct number and type of plates and bring them to the counter. The faster you complete your tasks, the more money you'll earn!"

Controls:

- L-Stick - Move
- A - Grab / Place dish
- X / Y - Clean dish

Scene: Single screen.

Words learned: Plato, Grande, Pequeño, Uno, Dos, Tres, Cuatro, Cinco, Sucio, Limpio, Necesitar, Yo, Rápido, Hay, Muchos, formas Plurales.

Loop

1. Grab the dirty dishes from the dirty dishes side of the table.
2. Put them in the washing sink.
3. To wash them, interact empty handed with the washing sink. A button will be displayed and the player needs to rapidly press it in order to clean the dish. Clean dishes automatically move to the side table.
4. Grab the clean dishes and put them in the cabinet.
5. The head chef will ask for a certain amount and a certain type of dish in Spanish (this will be presented via a speech bubble). The "order" has a time limit to be completed.
6. Grab the dishes that the head chef asked for by pressing a specific button.
7. Place the dishes on the clean side table.
8. At the end of the round, a status screen will appear with the completed orders, the amount of money per order and the grand total of money gained.

Rules

- The round lasts for 1 minute. A timer must be shown.
- The player can carry a maximum amount of 5 dishes.
- There are 2 types of dishes: big and small.
- The head chef can only ask for up to 5 dishes.
- The head chef can ask for a combination of dishes (ex. 2 big plates and 3 small plates). These combinations cannot surpass the 5 dish limit.
- Big plates are cleaned with the X button and small plates are cleaned with the Y button.
- Big plates take 6 +- 1 button presses to be cleaned.
- Small plates take 3 +- 1 button presses to be cleaned.
- There is no penalty for pressing the wrong button while cleaning.
- There are 3 spawn points for the dirty dishes.
- The spawn rate of dirty dishes should be random between 2 and 5 seconds (for each spawn point independently of each other).
- The head chef will ask for dishes randomly between every 6 and 8 seconds.
- There can be up to 3 active orders.
- Orders have a time limit. The time limit is 20 +- 3 seconds.
- Each order pays \$5 Pesos.
- Orders that are completed fast (before 40% of the time has passed) get a 1.5 multiplier to the standard pay.
- The clean dishes are automatically sorted when placed in the cabinet.

- The cabinet can hold an infinite amount of dishes.
- When the player places an "order" on the clean side of the table, it is checked to see if it fits one of the active orders.
- If it is, the player gets some money. If not, the player gets 0 money.
- For wrong orders, feedback will be shown to the player where they messed up.

Skill

Water Splash: Throw a bucket of water to deal heavy damage.

Job #2: Store Stocker

A common job among foreigners, a Store Stocker helps to put products into the correct spots in a store. A good job to learn about products sold in stores such as food and other miscellaneous items.

Prototype Scope

Brief description: Minigame where you need to send the product to the correct destination.

Tutorial text: "You'll be responsible for handling the conveyor belts. Watch the product under the x-ray sensor at the start of the belt. Remember what it is and where it needs to go.

When the product reaches the end of the belt, select the correct destination. The more accurately you complete your tasks, the more payment you'll receive."

Controls: L-Stick / RB or LB - Change tracks.

Scene: Single screen.

Words learned: Tomate, Cebolla, Aguacate, Chile, Leche, Queso, Pollo, Carne, Pescado, Cerdo, Tortilla y Jugo.

Loop

1. An image of a product will be shown through an x-ray monitor at the start of the line (bottom of the screen).
2. After a certain amount of time, it will move forward a set distance, allowing for another product to be under the x-ray monitor.

3. After a certain amount of time, it will move forward again, allowing for a maximum of 3 objects to be on the treadmill.
4. Players must select the track to send each product to the correct destination when the treadmill moves again.

Rules

- Up to 3 products can be on screen. The 1st position being the one under the x-ray monitor, the 2nd one in the middle and the 3rd one just before the moving tracks.
- The 3rd item is the one that will be sent to the destination when the treadmill moves.
- The treadmill needs to move every 5 seconds.
- There are 4 possible destinations.
- Players can cycle between them using the LB or RB buttons or the L-Stick.
- Highlight the currently selected track to provide visual feedback to the player.
- The destinations will have the name of the product in Spanish written on top.
- The round lasts 1 minute.
- You earn money for every correct packaging.
- You build a combo for every correctly sorted package.
- The higher the combo, the higher the multiplier at the time of payment.
- For wrong orders, feedback will be shown to the player where they messed up.

Skill

Eat Lunch: Recover HP by eating a random product from the store.

Language Academy

The L2 Language Academy serves as a central hub for players to assess their language proficiency and progress in their Spanish learning journey. By taking exams, players can earn valuable licenses that unlock advanced job opportunities.

Magnolia's desire to fully immerse herself in the language and culture aligns perfectly with the Language Academy's purpose. Passing exams and obtaining higher-level licenses not only validate her progress but also enable her to earn better pay and continue her adventures.

Similar to real-life language schools, the Language Academy utilizes licenses to recognize language proficiency. For example, the Common European Framework of Reference

(CEFR) is a widely recognized system that categorizes language skills into six levels (A1, A2, B1, etc.). This aligns with the concept of licenses and levels within the game.

Unlike real-world language exams, *Language Quest* offers a supportive and forgiving environment. Failing an exam is not a deterrent, as players can retake tests and continue their learning journey at their own pace. This approach encourages experimentation and reduces the pressure associated with traditional language assessments.

Exam

The Language Academy offers a comprehensive assessment of players' language skills through three distinct question types. Each exam presents a limited time frame for answering each question, requiring accuracy and speed.

To successfully pass the exam, players must provide correct answers to all questions. This rigorous evaluation ensures that players have a solid understanding of the language and are prepared for the challenges that lie ahead.

Types of Questions

1. Multiple Choice

Rules

- 4 options. Only one possible good answer.
- Each time the question is presented, the positions of all the options should be randomized so the answer is not always in the same position.

- Can have an image added to the sentence.

2. Pairs

Question #

Group the corresponding pairs

Spanish word	English word
Spanish word	English word
Spanish word	English word
Spanish word	English word

Question #

Group the corresponding pairs

1st Selection	2nd Selection
Disabled option	English word
Spanish word	English word
Spanish word	English word

Rules

- 4 pairs of words.
- Words in English on the right and words in Spanish on the left.
- Selecting one word will highlight it. The next word to be chosen will then check if it's the correct pair.
 - If it's the correct pair, they will glow in the correct state for a second and then become disabled.
 - If it's incorrect, they will return to the neutral state while shaking a little bit.

3. Correct Meaning

Rules

- A sentence in Spanish will be written with 2 - 4 words highlighted.
- A prompt telling the players to choose the word that means the same in Spanish will be shown.
- Players will need to select the correct answer.

Technical	Notes
Timer	• Timer must countdown from 30 seconds. • When it reaches 10 seconds, it should turn red to give a sense of urgency. • The timer is reset after each question.
Results	• Show if the player passed or not. • Players should be able to navigate using the Joystick or the LB/RB buttons between the questions and see where the correct answer is in each question.
Pass or Fail	• Players need to answer the 5 questions correctly to pass. • If they pass or fail, a badge should appear on screen to indicate this to the player.

License / Levels

The Language Academy offers a tiered system of licenses that reflect increasing language proficiency. As players progress and pass exams, they will earn higher-level licenses, unlocking access to more advanced job opportunities and language-related content.

The words and phrases featured in exams will often align with the vocabulary and grammar encountered in various jobs and everyday interactions within the game world.

Job Progression

Advancing through the Language Academy and obtaining higher-level licenses will open doors to new and more challenging job opportunities. Additionally, players will be able to revisit previously completed jobs to tackle more demanding levels.

These advanced job levels will require a deeper understanding of the language, involving more complex vocabulary and tasks. Successfully completing these challenges will not only enhance language proficiency but also unlock new skills and abilities for use in combat.

Prototype Scope

The prototype will feature 2 jobs that can be accessed from the start. It will not have the license feature, so jobs will remain on the same level.

The exam will feature over 30 different questions based on words and phrases found throughout the prototype.

Art, UI & UX

The visual aesthetic of *Language Quest* aims to create a vibrant and immersive world that complements the game's narrative and gameplay. The game's art style and UI design are designed to capture the early PS2 / 3DS era of 3D games.

An “old-school” poly-based art reminiscent of early PS2 / 3DS era games. Going clockwise: Pokémon Sun & Moon (The Pokémon Company), Bravely Default (Square-Enix), Dragon Quest VIII 3DS (Square-Enix) and Persona 3 (Atlus).

Moodboard

Visual Guidelines

Name	Visual Reference	Description
Color Palette	The diagram shows a network of colored circles connected by lines. The circles are labeled: Houses (brown), UI (dark blue), Magnolia (pink), and others (orange, light blue, green).	The game will feature a vibrant and immersive color palette inspired by Mexico. Prominent colors will include Mexican Pink (#bd176b) and Azul Anil (#3028ac), evoking the country's rich cultural heritage.

Name	Visual Reference	Description
Character Design		Magnolia, the protagonist, will be portrayed as a sporty and adventurous character with a background in martial arts. Her attire, including sporty clothing and a messenger bag, reflects her active lifestyle and aligns with the game's theme of exploration.
Environmental Design		The fictional city of Puerto Luna is inspired by the real-world city of Ensenada, Mexico. The game's environment will feature landscapes, buildings, and streets that capture the essence of the city's architecture and atmosphere.
Typography	This is the font used: Dekko.	The game will utilize Dekko, a sans-serif font known for its readability and personality. This choice ensures a pleasant reading experience for players.
UX		The UX will be designed to be intuitive and user-friendly, allowing players to navigate the game's menus and options with ease.
UI		The UI will feature bold and contrasting colors, influenced by Latin American design aesthetics. This creates a visually engaging and distinct interface.

Technical Considerations

Despite working within technical constraints, the game's art style will maintain a charming and distinctive aesthetic. The less detailed approach allows players to engage with the game's world while using their imagination to fill in the gaps. If the game were to enter full production, the art style would be refined and polished further, while preserving its core aesthetic.

Music & SFX

The game's soundtrack will evoke the vibrant and upbeat atmosphere of a coastal town. Acoustic guitars will play a prominent role, creating a relaxed and enjoyable ambiance. Incorporating elements of jazz will add depth and complexity to the musical compositions. While not mandatory, Spanish vocals in certain tracks can further enhance the cultural immersion.

Beyond its aesthetic appeal, music can serve as a valuable tool for language learning. By creating emotional and mnemonic links, music can aid in memorization and recall.

The sound effects (SFX) will complement the music's overall tone. Soft and subtle sounds will be used for confirmations, cancellations, and interactions with NPCs, ensuring a seamless and immersive gameplay experience.

While the current version of *Language Quest* does not include voice-over due to time and technical constraints, it is recognized as a crucial element for language learning. Ideally, all spoken text within the game would be voiced to enhance immersion and facilitate language retention.

If the project were to expand or receive additional resources, voice-over would be a top priority for future development. Incorporating voice acting would significantly elevate the overall language learning experience and provide a more authentic and engaging atmosphere.

These tracks and SFX offer examples of the desired tone, tempo, and instrumentation that would complement the game's visual style and narrative.

Note: Due to budget constraints, using these reference tracks and SFX as placeholders in the prototype is acceptable. However, it is important to acknowledge that these tracks and SFX are not intended for final use in the game and should be replaced with original compositions.

All songs and the SFX library listed are carefully accredited, and their use in the prototype is for reference purposes only.

Out of Scope Features

Voice over

Voice over is a crucial element for a language-learning game like *Language Quest*.

Having native Spanish speakers provide voice overs for all dialogues ensures that players are exposed to correct pronunciation, intonation, and natural speech patterns. Additionally, incorporating various accents can help players develop listening comprehension skills and become more accustomed to different regional variations of the language.

Translation

All text can be translated with a push of a button and the player can search for the definition of each individual word in the game seamlessly. The purpose is to give the player what they need, instantly.

Lingua System

The Lingua System is a comprehensive framework designed to enhance language learning within the game. It integrates seamlessly into various aspects of gameplay, including normal activities, combat, and puzzles.

The key components are:

1. Topic groupings: Words and phrases are organized into thematic groups, such as colors, shapes, greetings, and occupations. This approach facilitates contextual learning and helps players connect language with real-world concepts.
2. Dictionary: A resourceful system that contains every word and phrase seen by the player. Engaging with the system through minigames will give more information about the words in there.

Topic groupings

In *Language Quest*, Magnolia carries a language notebook that allows her to track her progress. As she progresses through the game, she will encounter various situations that trigger the addition of new topics to her notebook.

For example, after interacting with different NPCs at various times of the day, Magnolia might unlock a topic on greetings. This topic would include drawings of common

greetings like "good morning," "good afternoon," and "good night." The player would then be tasked with writing the corresponding Spanish words for each drawing.

Players can write what the meaning of a drawing is. After completing the page, the game will put the current definition and players will be able to translate those words to other texts in game. Image: Chants of Sennaar. RUNDISC.

Once a page is completed, the associated vocabulary will be unlocked for use in-game. This can be particularly helpful for solving puzzles, following directions, and interacting with NPCs. Additionally, completing pages can reward players with experience points, stat boosts, or access to new areas and content.

Dictionary

The Dictionary is a unique feature that tracks Magnolia's language progress. It consists of multiple sub-stats, each representing a specific aspect of language learning, such as verbs, nouns, and phrases.

Players will be able to easily see in which department of language are they doing better and in which they should put more time into. This will also let players know how far are they from getting to a certain level if needed for a job or quest. Image: Yakuza: Like a Dragon. Ryu Ga Gotoku Studio.

The player can check their progress on the Dictionary, which functions similar to the Pokedex in Pokemon. Instead of “catching” the words, players need to reveal various aspects of it by engaging in a minigame. Here is how the loop looks like:

- **Initial Encounter:** When Magnolia encounters a new word or phrase, it is added to the Lingua Dictionary.
- **Unlocking Information:** To reveal the full meaning and usage of a word, players must interact with it multiple times through various in-game activities.
- **Minigame Challenges:** Once a word is ready for deeper exploration, players will be presented with a minigame tailored to the word's type. For example, verbs might require conjugation exercises, while nouns might involve gender identification.

Certain jobs may require specific language proficiencies to unlock or progress. Some characters may only be accessible or fully interact with Magnolia if she has reached a certain language level.

Bond System

The bond system is a way for Magnolia to bond with others. Along her adventure, she will form many links with special people in her life. A student from her school, the family she lives with, a former athlete star, among others. A bond will have **n** levels in order to master it.

In the narrative sense, these bonds will be additional substories that will involve Magnolia and a specific character. Dialogue between them will further their story together.

In the gameplay area, having stronger bonds will mean that the character will be strong in battle. General stat buffs, unique skills and unique jobs will unlock for both characters.

The Lingua System will also play a role here. Some bonds will require a certain level to be able to initiate it. They might also be behind a specific job, which in turn requires a certain level of language.

The UI will let players know a brief explanation of that party member, their current relationship and their level. Additional information such as skills and buffs obtained from the Bond level can also be viewed here.
